No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1994 articles are as shown on the article title pages; if no fee code appears, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 167

NUMBER 1, SEPTEMBER 1994

F. HEGELUND, H. BÜRGER, AND O. POLANZ. The High-Resolution Infrared Spectrum of the ν_4, ν_5, and ν_6 Bands of *trans*-Di-imide Revisited 1

DANIEL COSSART. Rotational Analysis of the $B^2\Sigma^+$–$X^2\Sigma^+$ Transition of CS^+ 11

H. HARDER, C. GERKE, H. MÄDER, J. COSLÉOU, R. BOCQUET, J. DEMAISON, D. PAPOUŠEK, AND K. SARKA. Microwave, Millimeter-Wave, and Submillimeter-Wave Spectra of 1,1,1-Trifluoropropyne: Analysis of the Ground and $v_{10} = 1$ Vibrational States and Observation of Direct *l*-Type Resonance Transitions 24

J. JONSSON. The $b'^3\Pi$–$a^3\Delta$ System of ZrO 42

OLAVI VAITTINEN, LAURI HALONEN, HANS BÜRGER, AND OLIVER POLANZ. Vibration–Rotation Interactions in Bending and CBr Stretching Fundamental Band Systems ν_3, ν_4, and ν_5 of Monobromoacetylene 55

CH. CHARDONNET AND CH. J. BORDÉ. Hyperfine Interactions in the ν_3 Band of Osmium Tetroxide: Accurate Determination of the Spin–Rotation Constant by Crossover Resonance Spectroscopy 71

KULDIP SINGH AND JAMES J. O'BRIEN. Intensities and Self-Broadening Coefficients of Weak Water Vapor Lines in the 720-nm Region Determined by Intracavity Laser Absorption Spectroscopy 99

O. N. ULENIKOV, R. N. TOLCHENOV, M. KOIVUSAARI, S. ALANKO, AND R. ANTTILA. High-Resolution Fourier Transform Spectra of CH_2D_2: Pentade of the Lowest Interacting Vibrational Bands $\nu_4(A_1)$, $\nu_7(B_1)$, $\nu_9(B_2)$, $\nu_5(A_2)$, and $\nu_3(A_1)$ 109

A. LUNDSGAARD, J. C. PETERSEN, AND J. HENNINGSEN. High-Resolution Fourier Transform Spectrum of the C–O Stretch Band of CH_3OD 131

GIOVANNI MORUZZI, LI-HONG XU, RONALD M. LEES, BRENDA P. WINNEWISSER, AND MANFRED WINNEWISSER. Investigation of the Ground Vibrational State of CD_3OH by a New "Ritz" Program for Direct Energy Level Fitting 156

SYBILLE HAAS, GISBERT WINNEWISSER, KOICHI M. T. YAMADA, KEIJI MATSUMURA, AND KENTAROU KAWAGUCHI. The High-Resolution Spectra of the ν_{11} Band of Triacetylene near 622 cm^{-1}: Revised Assignments for Hot Bands 176

F. J. LOVAS, S. P. BELOV, M. YU. TRETYAKOV, J. ORTIGOSO, AND R. D. SUENRAM. The Microwave Spectrum and Structure of the CH_3OH–CO Dimer 191

M. KOIVUSAARI AND R. ANTTILA. The ν_{10} Band of Propyne-d_4 205

A. G. MAKI, CHE-CHUNG CHOU, K. M. EVENSON, L. R. ZINK, AND JOW-TSONG SHY. Improved Molecular Constants and Frequencies for the CO_2 Laser from New High-*J* Regular and Hot-Band Frequency Measurements 211

MARJO HALONEN. High-Resolution FTIR Study of the ν_2 Band System of Monobromoacetylene 225

NOTE

G. T. FRASER, F. J. LOVAS, AND R. D. SUENRAM. On the Apparent Methyl Internal-Rotation Barrier Decrease in Weakly Bound Methanol Complexes 231

5 153HI XL 1431
2/95 31249-200

LETTER TO THE EDITOR

TOMOHIDE KATAYAMA, FUSAKAZU MATSUSHIMA, AND HIROYUKI SASADA. Frequency Measurement of the $v = 6 \leftarrow 0$ Overtone Band Transitions of HI Using Titanium:Sapphire Laser 236

NUMBER 2, OCTOBER 1994

G. WLODARCZAK, J. DEMAISON, N. HEINEKING, AND A. G. CSÁSZÁR. The Rotational Spectrum of Propene: Internal Rotation Analysis and *ab Initio* and Experimental Centrifugal Distortion Constants 239

M. HAVENITH, M. PETRI, C. LUBINA, G. HILPERT, AND W. URBAN. IR Spectroscopy of $(CO)_2$ Using Concentration-Frequency Double Modulation in a Supersonic Jet Expansion 248

J.-Y. MANDIN, V. DANA, L. H. COUDERT, M. BADAOUI, F. LE ROY, M. MORILLON-CHAPEY, R. FARRENQ, AND G. GUELACHVILI. Line Positions and Intensities in the Fundamental $1 \leftarrow 0$ Forbidden $^2\Pi_{1/2}$–$^2\Pi_{3/2}$ and $^2\Pi_{3/2}$–$^2\Pi_{1/2}$ Subbands of Nitric Oxide 262

S. LANGLOIS, T. P. BIRBECK, AND R. K. HANSON. Temperature-Dependent Collision-Broadening Parameters of H_2O Lines in the 1.4-μm Region Using Diode Laser Absorption Spectroscopy 272

V. BRAUN AND P. F. BERNATH. Infrared Emission Spectroscopy of HBr 282

V. V. PUSTOGOV, F. KÜHNEMANN, B. SUMPF, Y. HEINER, AND KA. HERRMANN. Pressure Broadening of NO_2 by NO_2, N_2, He, Ar, and Kr Studied with TDLAS 288

I. KLEINER AND M. HERMAN. The Fundamental ν_{14} Band of Acetaldehyde .. 300

ESA KAUPPI. Improvements in a Curvilinear Internal Coordinate Model for the CH Stretching and Bending Vibrations in Trihalomethanes 314

JACOB BAKER. The $B^1\Sigma^+(v = 2)$–$k^3\Pi(v = 0)$ Interaction in CO 323

C. HARIDASS, S. PADDI REDDY, AND A. C. LE FLOCH. The Fourth Positive $(A^1\Pi$–$X^1\Sigma^+)$ System of $^{12}C^{18}O$ and $^{13}C^{18}O$: Perturbations in the $A^1\Pi$ State 334

HISASHI ABE, TAKASHI KIKUCHI, KOJI TAKAHASHI, MASAHARU FUJITAKE, AND NOBUKIMI OHASHI. Near-Infrared Diode Laser Spectroscopy of the CCO Radical: Analysis of the $\tilde{A}(010)^3\Sigma^{(+)}$ and $\tilde{A}(010)^3\Sigma^{(-)}$ States 353

THOMAS M. GOYETTE, CHRISTOPHER D. PAULSE, LEE C. OESTERLING, FRANK C. DE LUCIA, AND PAUL HELMINGER. Torsional Splitting in the $2\nu_9$ and ν_5 Vibrational Band of HNO_3 365

WOLFGANG QUAPP, STEFAN KLEE, GEORG CH. MELLAU, SIEGHARD ALBERT, AND ARTHUR MAKI. Fourier Transform Spectra of Overtone Bands of HCN from 4800 to 9600 cm^{-1}: Some New Transitions of Bending Combination Modes 375

J.-M. FLAUD, C. CAMY-PEYRET, PH. ARCAS, H. BÜRGER, AND H. WILLNER. $H_2{}^{80}Se$: High Resolution Study of the $3\nu_2$, $\nu_1 + \nu_2$, and $\nu_2 + \nu_3$ Bands and Determination of Equilibrium Rotational Constants and Structure 383

J. DEMAISON, J. COSLÉOU, R. BOCQUET, AND A. G. LESARRI. Submillimeter-Wave Spectrum and Structure of Acrylonitrile 400

T. GEORGE, M. H. WAPPELHORST, S. SAUPE, M. MÜRTZ, W. URBAN, AND A. G. MAKI. Sub-Doppler Heterodyne Frequency Measurements of Carbonyl Sulfide Transitions between 56 and 62 THz 419

CHIN-CHUN TSAI, JOHN T. BAHNS, AND WILLIAM C. STWALLEY. Optical–Optical Double Resonance Spectroscopy of the $6^1\Sigma_g^+$ "Shelf" State of Na_2 Using an Ultrasensitive Ionization Detector 429
CHIN-CHUN TSAI, JOHN T. BAHNS, THOU-JEN WHANG, AND WILLIAM C. STWALLEY. Optical–Optical Double Resonance Spectroscopy of the $2^1\Pi_g$ State of Na_2 Using an Ultrasensitive Ionization Detector 437
C. DI LAURO, F. LATTANZI, AND R. AVELLINO. Vibration–Torsion Dynamics of Ethane-like Molecules in Degenerate Vibrational States 450

NOTES

AUTHOR INDEX FOR VOLUME 167 479

SUBJECT INDEX FOR VOLUME 167 481

JOURNAL OF MOLECULAR SPECTROSCOPY

INFORMATION FOR AUTHORS

Manuscripts describing original work in areas of molecular spectroscopy should be submitted in duplicate to:

K. Narahari Rao
Journal of Molecular Spectroscopy
Editorial Office
525 B Street, Suite 1900
San Diego, California 92101-4495

Telephone: (619) 699-6469
Fax: (619) 699-6859

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Molecular Spectroscopy* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. As in the past, the Publisher will continue to grant all reasonable requests for permission to reproduce material from contributions appearing in the Journal. However, it is recommended that such requests be first made to the Editor for appropriate action.

Form of Manuscripts. Manuscripts in duplicate should be typewritten with wide margins on high-quality bond paper using double or triple spacing throughout. Copies should include figures, tables, etc.

Each page of the manuscript should be numbered. The first page should contain the article title, author's name, and affiliation. At the bottom of this page, the number of manuscript pages, figures, and tables should be noted. The second page should contain a proposed running head of less than thirty-five characters. It should also contain the name and complete mailing address of the person to whom proofs are to be sent. The third page should contain an abstract.

"Letters to the Editors" will be devoted to the announcement of important results with a minimum of delay. "Notes" will also be published as speedily as possible. Contributions to this section containing "Letters to the Editors" and "Notes" should not exceed 1½ printed pages, including figures, equations, and tables. They should follow the style and form used for manuscripts except that they need not be accompanied by abstracts.

List of Symbols. Authors should submit a complete list of symbols identifying each for the printer. This list will not appear in print.

Tables. Tables are to be numbered consecutively with Roman numerals. The table numbers and titles should be listed on a separate sheet. *Tables will be reproduced as camera-ready copy.* Therefore, they should be carefully and clearly typed since, except for reduction in size, they will appear exactly as submitted. If the tables will be prepared using a word processor or computer, it is recommended that a daisy wheel or laser printer be used. If a daisy wheel or laser printer is unavailable and you will be using a dot matrix printer, it is important that the density of the dots (i.e., the number of dots in the matrix) be sufficient that the numbers do not appear broken. Short tables of one or two pages in length should be typed double-spaced and planned to fit an area of 5 × 8¼ in. after reduction of no more than 40%. Lengthy tables should be typed single-spaced and divided into sections so that each section can fit in the area

indicated. *Repeat column headings when dividing tables.* No corrections can be inserted after the line cuts have been made. Do not use a comma to separate groups of 3 digits; merely use a space. For instance: 2,526,000 should be typed 2 526 000. Insert a zero in front of a decimal point when it applies. For instance, instead of .36, use 0.36.

Footnotes to tables should be identified by superscript letters and placed at the bottom of the page containing the table. Footnotes in the text should be identified by superscript numbers and listed consecutively on a separate page.

Equations. Equations should be numbered consecutively with the number placed in parentheses to the right of the equation. Reference to equations should use the form Eq. (3).

References. References should be cited in the text by underlined number in parentheses (in order of appearance). The literature cited should appear on a separate page (double-spaced) and should be listed consecutively according to reference number. Following the reference number, the author's initials, last name, journal name, volume, inclusive pagination, and year (in parentheses) should be listed in that order. Abbreviations of journal names should follow the style of the latest *Chemical Abstracts Service Source Index.* For book references give the author's name, name of book, editor's name (if any), edition (if other than first), chapter or page number, publisher's name, place, and year of publication.

Figures. All illustrations should be numbered as figures in sequence with Arabic numerals. Each figure should have a descriptive legend and these should be listed on a separate sheet. Figures should be planned to fit the proportion of the printed page (5 × 8¼ inches), and care should be taken that lettering on the original is large enough to be legible after a reduction of 50 to 60 percent. Illustration copy should measure no larger than 12 × 15 inches. Each figure should be identified in a margin with the name of the journal, author's name, and figure number. Photocopies of figures are not acceptable. Illustrations in color can be accepted only if the authors defray the cost.

Proofs. Proofs will be sent to the author, with reprint order forms. Fifty reprints of each article are granted free of charge, and additional copies may be purchased. Authors will be charged for excessive alterations.

Personal Computer Disks. Manuscripts may be submitted to *Journal of Molecular Spectroscopy* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material and art must also be prepared as camera-ready copy; see the sections on Tables and Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

JOURNAL OF MOLECULAR SPECTROSCOPY

Manuscript Title:

Authors:

I hereby confirm the assignment of all copyrights in and to the manuscript named above in all forms and media to Academic Press. (For U.S. government employee authors, this provision applies only to the extent to which copyright is transferable.) I also confirm that the manuscript contains no material the publication of which would violate any copyright or other personal or proprietary right of any person or entity, and I acknowledge that Academic Press is replying on this letter in publishing this manuscript.

I also hereby confirm that Academic Press has the nonexclusive right to publish or otherwise distribute any auxiliary or supporting materials that are submitted with this manuscript.

_____ _____

Date Signed

_____

Name (and title if not author)

To be signed by at least one of the the authors (who has obtained the assent of the others, if any). In the case of a "work made for hire" (a work prepared by an employee within the scope of his or her employment or commissioned as a work for hire under a written agreement), an authorized representative of the employer should sign.

Please note: Manuscripts cannot be processed for publication until the Publisher has received this signed form.

If the manuscript is not published by Academic Press, this letter will not take effect.

Please return this form to: Journal of Molecular Spectroscopy, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, CA 92101-4495.

Today's Advances are Tomorrow's Technology.
Get the Facts.

ENCYCLOPEDIA OF PHYSICAL SCIENCE AND TECHNOLOGY

SECOND EDITION

edited by
Robert A. Meyers

From the Reviews of the First Edition

"Comprehensive, current, easy to use, and authoritative.... It exceeds all of its goals of providing a scholarly encyclopedia covering the physical sciences, mathematics, and engineering. It is highly recommended for large public libraries with a science and technology division, academic libraries, and special libraries with an interest in science and engineering."

—BOOKLIST/REFERENCE BOOKS BULLETIN

"The outstanding feature of this work is the currency of the material covered. This reference tool will serve as a research aid for scholars and advanced students and will find use in academic, special and large and medium-sized public libraries."

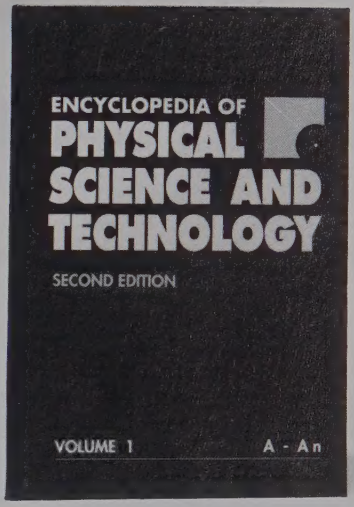
—THE NEW YORK PUBLIC LIBRARY

"I expect it to become a standard in every library attempting to represent broadly the fields of science and technology."

—THE LOS ANGELES PUBLIC LIBRARY

"This encyclopedia will be a very useful and needed addition to the literature of the physical sciences and technology."

—AMERICAN REFERENCE BOOKS ANNUAL



A massive revision of the distinctive **Encyclopedia of Physical Science and Technology**, this **Second Edition** includes 155 new articles that fill three volumes—a total of 2,400 additional pages. This eighteen-volume work maintains the high quality of the original edition, praised by both the Los Angeles and New York Public Libraries. Featuring longer and more complete articles than other similar works and specifically covering all the physical sciences, this encyclopedia deserves a place on every library's bookshelf.

Comparison of the First and Second Editions	*First Edition*	*Second Edition*
Volumes	15	18
Articles	550	705
Pages	11,651	14,080
Bibliographic Entries	5,000	6,500
Figures	6,600	8,500
Tables	1,400	1,800
Illustrations	5,500	8,200
Glossary Entries	6,800	8,700
Index Entries	55,000	70,000
Chemical and Mathematical Equations and Algorithms	13,850	17,625

Key Features

- Articles are arranged alphabetically for easy access
- Each entry begins with a detailed table of contents, a glossary of unusual terms, and a concise definition of the topic, followed by an in-depth presentation
- Extensive cross-references
- Each article has passed a review by its author's peer group
- 92% of the articles have been revised and updated
- 155 articles have been added

Eighteen-Volume Set
1992, 14,080 pp., $2500.00/ISBN: 0-12-226930-6

An International Journal Designed for the Diverse Community of Users and Developers of Novel X-Ray Imaging and Analysis Techniques

Journal of X-Ray Science and Technology

Editor-in-Chief
Larry Knight
Brigham Young University, Provo, Utah
Associate Editors
William E. Dibble and James M. Thorne
Brigham Young University, Provo, Utah

The **Journal of X-Ray Science and Technology** is designed to provide scientists and engineers with a single literature source covering new developments in the field of x-ray imaging and analysis techniques. Reports of original research and timely reviews of the best technical and esthetic quality will be published.

Research Areas Include

- Applications: analytical, nondestructive testing, microelectronics, biological/medical imaging, x-ray astronomy, materials and surface science
- Interaction of x rays with matter: x-ray phenomena and optical constants
- Sources: synchrotron-generated x rays, x-ray lasers, laser-produced plasmas, novel solid sources
- Optical elements: grazing incidence optics, multilayer mirrors, zone plates, gratings
- Optical instruments: interferometers, spectrometers, microscopes, telescopes, microprobes
- Detectors: CCD arrays, position-sensitive detectors
- Signal processing: coded imaging, tomography
- Related topics and future trends

Volume 4 (1993/1994), 4 issues ISSN 0895-3996
In the U.S.A. and Canada: $110.00 All other countries: $123.00

Manuscripts may be submitted in quadruplicate to:
JOURNAL OF X-RAY SCIENCE AND TECHNOLOGY
Editorial Office, Nineteenth Floor
525 B Street, Suite 1900, San Diego, CA 92101-4495

Sample copies and privileged personal rates are available upon request. For more information, please write or call:
